

Trip report Panamá

desde el 1 de marzo del 2022 hasta el 11 de marzo del 2022

Introducción

Este es el informe de un viaje ornitológico realizado por un grupo de ocho participantes recorriendo el Centro de Panamá (P.N. Soberanía, Discovery Center y Pipeline Road), la region de Guna Yala/San Blas (Nusagandi), P.N. de Darién, Chiriquí, Cerro Punta, P.N. Volcán Barú y Boquete, durante el period del 1 de marzo del 2022 hasta el 11 del mismo mes. Casi todas las citas realizadas fueron archivadas directamente en el campo por medio de la aplicación de [edge://newtab \(observation.org\)](https://newtab.observation.org) para iPhone, a saber IObs, por Maarten Platteeuw. Asimismo, estas observaciones vienen directamente vinculadas a la hora de observación y al lugar exacto, con excepciones de determinadas localizaciones que, por demanda de los guías, fueron mantenidos en secreto por razones de seguridad.

Cada una de las observaciones aquí citadas vienen enlazadas directamente con las condiciones de la observación, número de ejemplares, hora de la observación y un mapa indicando el lugar donde fueron hechas, y en algunas ocasiones se añaden detalles sobre sexo y/o edad de los ejemplares observados, así como de su comportamiento. Algunas especies no fueron registradas directamente en el campo y en ese caso carecen de los referidos detalles añadidos. Estas últimas son las indicadas en color gris y corresponden a aquellas aves vistas el mismo día en las proximidades de los enclaves mencionados.

Introduction

This is the trip report of a birding tour of eight European birders along Central Panama (Soberanía N.P., Discovery Center and Pipeline Road), the region of Guna Yala/San Blas (Nusagandi), Darién N.P., Chiriquí, Cerro Punta, Volcán Barú and Boquete, during the period of 1 till 11 March 2022. Virtually all records were directly registered in the field through the application [edge://newtab \(observation.org\)](https://newtab.observation.org) by Maarten Platteeuw. Thus, these observations were directly linked with both the time and the place of the individual records, except for some instances where, at the request of the local guide, the sites were maintained confidential for security reasons.

Each and every one of the records mentioned below are linked to the conditions of the record, these being: number of individuals involved, the time of observation and a map indicating the site. Whenever possible, details on sex and/or age of the birds observed are included as well as details about the behaviour observed. Some of the species were not directly recorded in the field and these records therefore lack such links; all these observations are marked in grey and were carried out in close proximity in time and space with the other observations mentioned for the same area and the same day.

All the logistics of the tour were impeccably designed by the Tamandúa Company, whose director is Ignacio Yúfera info@tamanduaphoto.com. We would like to express our deep gratitude to him and to all the tour guides (English and Spanish speaking), without whose assistance none of this would have been possible in such a short period of time.

epitheton *genibarbis* (Illiger 1811) para las diez subespecies restantes del Plain Xenops; la subespecie de Panamá es *Xenops minutus ridgwayi* según IOC (la lista seguida aquí) o sería *Xenops genibarbis ridgwayi* según HBW

¹⁸ Es un split reciente del Rufous-winged Antwren *Herpsilochmus rufimarginatus* de América del Sur y se trata de la subespecie *Herpsilochmus frater exiguus* del Este de Panamá

¹⁹ El Choco Grey Elaenia *Myiopagis parambae* (2 subespecies), ocurriendo en el extremo E de Panamá y la zona pacífica de Colombia y el N de Ecuador, es un split reciente del Grey Elaenia *Myiopagis caniceps*; el taxon en Panamá es denominado *absita*, con lo cual se ha observado Choco Grey Elaenia *Myiopagis parambae absita* como ya propuesto por HBW (del Hoyo 2020. All the birds of the world. Lynx Edicions, Barcelona)

²⁰ Es un split reciente del Paltry Tyrannulet *Zimmerius vilissimus*

²¹ HBW (del Hoyo 2020. All the birds of the world. Lynx Edicions, Barcelona) considera que los 6 subespecies de Olivaceous Flatbill que aparecen en Centro-América y el NO de Sur-América pertenecen a *Rhynchocyclus aequinoctialis* (denominado Western Olivaceous Flatbill) y las demás 3 subespecies a *Rhynchocyclus olivaceus* (Eastern Olivaceous Flatbill), en cuyo caso el taxon observado en Panamá se tendría que llamar Western Olivaceous Flatbill *Rhynchocyclus aequinoctialis*; de todos modos, la subespecie del E de Panamá es *bardus*, con lo cual según IOC vimos *Rhynchocyclus olivaceus bardus* y según HBW *Rhynchocyclus aequinoctialis bardus*.

²² Es un split reciente del Yellow-margined Flycatcher *Tolmomyias assimilis*
